3. Use ConnectedPulse CARE APP to connect device and get readings

First, please make sure that your phone Bluetooth is turned on the settings tab.

Connect to Device Android (Left) IOS (Right)

For Android, after signed in, please make sure you are on the Oximeter tab. Also, make sure that on the left top corner, the user selection is displayed the intended user name (currently "test" user), you can select user from that tab if you have multiple uses on your account. If your Bluetooth is not turned on, you can turn it on by touching the Bluetooth sign on the screen. Then you can touch "Search Oximeter" on the screen to connect. Then you can touch the "Turn On Notify" to display the reading and send those readings to your account on cloud server to save.

For Apple IOS APP, after signing in, please touch the Device tab on the bottom and the "ConnectedPulse" device should shown if both Oximeter and Apple Bluetooth is turned on. Touch the "ConnectedPulse", your oximeter will be connected and reading will be displayed.

4. Upload readings to cloud

For Android APP, the data is automatically uploaded and nothing need to be done.

For IOS APP, please touch the cloud sign on the right top corner, a screen will show all users on this account, please select the current user and touch to finish selection, the uploading will be performed.
